Seminar Review

Topic: K-Mean Clustering

The foundation gives a brief overview of K mean Clustering and the background. It briefly tells what how K-Mean clustering work.

Pros:

- **Abstract provides a good sketch of the paper; reader can expect what he is going to find in the paper.**
- **Foundation gives a good background of K mean clustering.**

Cons:

- **Very little information is available. In foundation just two paragraphs are written which is not enough to understand K-mean clustering.**
- **Some points are vaguely discussed, for example the characteristics of centroids are mentioned but not discussed, due to which reader might not understand the points completely.**
